Education

Southern New Hampshire University –
B.S. Computer Science, Software Engineering Focus (Expected Oct 2026)
GPA: 3.9 | President's List (9 terms)

Technical Skills

Languages: Java, Python, C++, SQL, MongoDB, GDScript
Frameworks & Libraries: Spring, REST APIs, JUnit, OpenGL, Arduino SDK
Tools: Git, Maven, Gradle, Docker, Linux, VS Code, Eclipse
Concepts: OOP, Data Structures, Agile/SCRUM, Debugging, API Design, Embedded Systems

Professional Experience

Computer Science Instructor – Foster Career and Technical Education Center
2025 - Present

- Designed and delivered software development curriculum focused on **Java**, **Python**, **OOP**, and **system design**
- Guided students through collaborative projects simulating **Agile/SCRUM** development workflow
- Built coding challenges emphasizing debugging, architecture decisions, and iterative development

Technical Support Representative III – TD Bank
2019 – Present

• Troubleshoot complex technical issues, assisting 50+ users daily, maintaining 85% first-contact resolution
• Collaborated with engineering teams to show reproducible issues and improve mobile app experience
• Analyzed recurring problems to identify root causes and reduce incident frequency
• Ranked top performer nationally for efficiency and technical troubleshooting

Projects

Pet Grooming Appointment Manager – Java, OOP, UML

- Developed object-oriented desktop application for appointment lifecycle management
- Modeled system architecture using UML class relationships and inheritance structures
- Implemented modular design patterns to improve maintainability and extensibility

Embedded Hourglass Timer – C++, Arduino, I2C

- Built an embedded timing system using Arduino Nano, motion sensors and LED matrix displays
- Implemented state-machine logic for gesture-based control and timed visual animation
- Integrated hardware-level debugging to stabilize sensor communication via I2C

Procedural Dungeon Generator – Godot, Algorithmic Generation

- Designed procedural generation system producing randomized dungeon layouts at runtime
- Built reusable modular room-generation architecture for scalability
- Optimized generation logic for repeated execution without performance degradation

Custom Minecraft Modded Server – Java, Systems Engineering

- Designed and deployed custom modded server with performance-focused configuration tuning
- Integrated plugins and modified gameplay mechanics through Java-based configurations
- Managed server stability, diagnostics and iterative feature improvements based on user testing
